- \* Hill Style
  - \* Brass pulls
  - \* Lined matching blanket
  - \* YKK™ zippers
  - \* Colour-coded trim
  - \* String tube

The **Duralite®** Case that you have chosen is built to give you many years of reliable service. In the event of any question or difficulty with your case, please contact the dealer where you purchased it. Your case needs very little for maintenance. The following information will help you in the upkeep of your **Duralite®** Case.

- Your **Duralite®** Cordura® Cover has been treated with advanced DWR-Dirt & Water Repellence. A clean nylon brush such as a nailbrush is very effective to keep the cover looking clean and fresh. For more stubborn soiling a damp brush is advantageous.
- YKK Zipper – made in Canada, is among the best quality zippers in the world. For long life, please ensure you unzip your cover fully before opening the case.
- The Snap Type Case Latch is the only item requiring maintenance. Depending on the climate conditions it may need lubrication about once a year. A lubricant, such as sewing machine oil is best. One drop should be applied in each of the latch ports, and two drops in the keyhole (one towards each side). The latch will then perform smoothly and effortlessly. The latch should close with one finger pressure. Lubricate if you notice difficulty in closing the latch. Please take care when applying oil so as not to get any on the cover or inside lining.
- Viola cases are adjustable to fit the size of your instrument. The upper instrument cradle (shoulder section) is movable. Simply take firm hold of the neck restraint straps with one hand while holding down the middle cross brace. Pull steady and firmly until the hook & loop releases. Reposition to desired location for your instrument and press the upper instrument cradle firmly down, in order to reattach the hook and loop in place.
- For Double Viola/Violin Cases the adjustment is located under the viola neck pad, which is removable to access the adjustment.
- If your case is equipped with a humidifier the following directions apply. Open the Closure end. Fill the unit until water emerges from evaporation vents. By firmly re-inserting the Closure, a vacuum is created which makes leaking impossible and the humidifying action commences. Regulate the humidity by turning the Sleeve to open or close the Control Vents, thereby allowing the desired evaporation.

- If for any reason you should need assistance, please contact your dealer where you purchased the case.
